Description

Can't see text in ES File Explorer when using Lollipop firmware.
When changing to eg. Classic theme everything shows correctly.
but how to fix the color issue by default when ES File Explorer is first installed so the colors are correct the first time?
<https://play.google.com/store/apps/details?id=com.estrongs.android.pop>

Some users report the dark background color bug also affects other apps and text is not visible.
It is mostly visible on RK3288 Lollipop firmware and T-Chip Firefly Lollipop SDK firmwares.

Bug has been solved.

ES File Explorer has too many adware and bloat, will from now on use MiXplorer that is faster, cleaner and has lots more features and is easier to use.
